

## Introduction

The '12th Annual Survey of Cybercrime Trends' found that online attackers who are determined to break into computers, steal information and interfere with business are more technologically advanced than those trying to stop them. This is frustrating because despite substantial investments in cybersecurity technologies, cyber criminals continue to find ways to circumvent these technologies in order to obtain sensitive information that they can monetize.

While it is true that cyber attackers are becoming more clever and their attacks more complex than ever before, but, does it mean that they are unstoppable?

Asian World Summit in association with internationally renowned Ethical Hacker, Sunny Vaghela, brings you this practical and interactive two-day course on 'Hacking Trends & Methods Workshop' to discover vulnerable gateways and unearth radically different approaches and countermeasures to cybersecurity.

## Key Takeaways

- Hands on demonstration of latest hacking techniques & tools
- Spotting systems vulnerabilities before hackers do
- Assessing how intruders escalate privileges
- Assuring networks and applications are secure against cyber attacks
- Countermeasures to secure a system

## Who should attend?

Heads, Directors, Vice Presidents, Senior Managers, Managers, Associates of:-

- Information Security
- Cybersecurity
- Information Technology
- Management Information Systems
- Engineering & System Architecture
- Network Infrastructure & Management System
- Operations
